

ABSTRACT OF THE DISCLOSURE

An electronic equipment has parts which may be subjected to maintenance and are specified by a maintenance range. The electronic equipment includes a setting part which is set with a predetermined maintenance range in which the maintenance is permitted, an authenticating part to authenticate validity of a maintenance-attending person for the electronic equipment, and a changing part to temporarily change the predetermined maintenance range set in the setting part, in response to a change instruction, when the authenticating part authenticates the validity of the maintenance-attending person.
